

When Your Competitors Change Price, How Fast Do You Know?

ArqVantage turns competitor movements into intelligent, governed pricing actions.

The largest revenue gap is usually not a product you don't have. It is a product already in your ERP, already selling on your own website that a competitor lists on the marketplace, capturing demand you could serve yourself.

Working out which of your SKUs competitors sell on marketplaces, whether each still clears margin after marketplace fees, and which are safe to publish, is work manual research cannot sustain at catalog scale.

MEET ARQVANTAGE

Product research, repricing intelligence and governed decisioning on one platform.

ArqVantage matches your ERP catalog against what competitors list on marketplaces, surfaces the SKUs you already sell but haven't published, prices them against real cost and margin, and lists them to your seller account, with **autonomy calibrated to risk**.

CATALOG SYNC — *enterprise ERP SKUs*

MARKET SCAN — *competitor SKUs on*

MARGIN ENGINE — *cost, price & margin*

RISK TIERING — *low / medium / high*

LIST ON MARKETPLACE

WHAT ARQVANTAGE DOES

Catalog Sync

Ingests enterprise ERP SKUs, cost and availability to establish everything you already sell and can source profitably.

Market Scan

Maps competitor marketplace listings back to your catalog to expose SKUs you sell off-marketplace, plus genuinely new products.

Margin Engine

Models landed cost, marketplace fees, prevailing price band and resulting margin per SKU before anything is published.

Repricing Intelligence

Keeps live listings competitive as the market moves, within MAP floors, margin ceilings and channel-specific constraints.

Governed Decisioning

Assigns each opportunity a low, medium or high-risk tier that determines whether it lists autonomously, in a batch approval queue, or under expert review.

DESIGNED FOR MEASURABLE ACTION

<5 min

Target to reprice a live listing when the market moves

10–15%

Target revenue lift from listing existing SKUs on the marketplace

100%

MAP, margin and risk-tier guardrails enforced on every listing

Product research is also a governance decision

Not every SKU you could list should reach the marketplace the same way.

ArqVantage is designed to calibrate autonomy to risk rather than force every opportunity through one approval path. Strong-margin SKUs with clear demand publish on their own; thin-margin or sensitive items route to a human.

That gives commercial teams channel expansion at machine speed while keeping deliberate control over **what appears under their seller account and at what price.**

FROM CHANNEL GAP TO GOVERNED LISTING

The ArqVantage workflow

AUTONOMY CALIBRATED TO RISK

Low Risk	Medium Risk	High Risk
AUTONOMOUS	BATCH APPROVAL	EXPERT REVIEW
- Strong margin, clear demand - Listed on the marketplace automatically - No human touch required	- Promising; quick gut-check needed - One-click batch approval - Reviewed as a group, not per SKU	- Thin margin or sensitive items - Approve, reject or edit per SKU - Full human-in-the-loop control

WHERE ARQVANTAGE CREATES VALUE

BUSINESS NEED	ARQVANTAGE APPROACH
Products sold on your site but not the marketplace	Surface catalog SKUs competitors already list there
Manual product research	Automate competitor catalog and marketplace scanning
Uncertain profitability after marketplace fees	Model cost, fees and margin before anything is listed
Slow listing cycles	Auto-publish low-risk SKUs and batch-approve the rest
Margin and compliance exposure	Apply MAP, margin and channel guardrails on every price

Start with the Marketplace Gap Scan
Match your catalog against your **top 10 competitors'** marketplace listings for **30 days**.

THE ASSESSMENT DELIVERS

- An unlisted-SKU gap report
- A margin-ranked opportunity list
- A risk-tiering and autonomy framework
- A model of the revenue those SKUs would have earned

See what you already sell that competitors are listing without you
